(54) MEMBERSHIP MANAGING METHOD AND INFORMATION COLLECTION AND PRESENTATION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To manage membership information and to provide members with various kinds of information by using a radio channel in a system to provide service via a vehicle device and the radio channel.

SOLUTION: A center 2 to provide the service like emergency assistance, etc., to the vehicle 1 of a member via a vehicle device and radio channel is provided with facilities to collect and manage the membership information by using the radio channel. In addition, facilities to provide the member with various kinds of information by using the radio channel is also provided. The system to collect emergency information and the one to collect

maintenance information of the vehicle exist as an information collection system. In addition, a system to provide traffic information and leisure information exist as an information presentation system. In this way, the membership information is managed and road guidance and sightseeing information, etc., are provided by using an emergency information notifying device without using other communication means.

(54)【発明の名称】 会員管理方法および情報収集提供システム

(57)【要約】

【課題】 車両装置と無線回線を介してサービス提供を行なうシステムにおいて、無線回線を使用して会員情報を管理したり、会員に各種情報を提供する。

【解決手段】 車両装置と無線回線を介して、会員の車両1に緊急援助などのサービス提供を行なうセンター2に、無線回線を使用して会員情報を収集管理する設備を設ける。また、無線回線を使用して会員に各種情報を提供する設備も設ける。情報収集システムとしては、緊急情報を収集するものと、車両のメンテナンス情報を収集するものがある。また、情報提供システムとしては、交通情報やレジャー情報を提供するものがある。このようにして、他の通信手段を使わずに、緊急情報通報装置を利用して、会員情報を管理したり、道路案内や観光情報などを提供することができる。

【特許請求の範囲】

【請求項1】 無線回線を介して会員に対して事故救助などのサービス提供を行なうセンターと車両の事故発生などの緊急事態を検出して無線回線を介して前記センターに緊急事態情報を通報する車両装置とからなる車両緊急事態情報通報システムの会員管理方法において、前記センターから無線回線を使用して前記車両装置を呼び出し、前記車両装置に記憶されている会員情報を読み取り、前記センターから前記会員管理のデータを前記車両装置に送信することにより会員に関する情報を管理することを特徴とする会員管理方法。

【請求項2】 車両の事故発生などの緊急事態を検出して無線回線を介して事故救助などのサービス提供を行なうセンターに緊急事態情報を通報する車両装置において、前記センターからの呼び出しに応答する手段と、記憶装置の会員管理データを読み取って前記センターに送信する手段と、前記センターからの会員管理のデータを受信して前記記憶装置に格納する手段とを具備することを特徴とする車両装置。

【請求項3】 会員に事故救助などのサービス提供を行なうセンターと、車両の事故発生などの緊急事態を検出して無線回線を介して前記センターに緊急事態情報を通報する車両装置とからなる情報収集提供システムにおいて、前記センターに、前記車両装置を呼び出して各種データを収集する手段と、前記車両装置に各種データを送信する手段と、前記車両装置からの要求に応じて各種情報を検索して提供する手段とを設け、前記車両装置に、前記センターからの呼び出しに応答する手段と、前記車両装置の状態情報データを読み取って前記センターに送信する手段と、前記センターからの各種情報を受信して記憶装置に格納する手段とを設けたことを特徴とする情報収集提供システム。

【発明の詳細な説明】

【0001】

【発明の属する技術分野】本発明は、車両緊急情報通報システムの会員管理方法に関し、特に、無線回線を使用して会員を管理する会員管理方法に関する。

【0002】

【従来の技術】車両緊急情報通報システムは、車両の衝突などの事故発生時に、車両に搭載した車両緊急情報通報装置から無線回線を介して、自動でサービスセンターへ車両緊急情報を通報するシステムである。このシステムにより、救急車やパトカーなどの緊急車両が現場へ到着するまでの時間を短縮し、けが人をより迅速に救出、救済することができる。また、急病人発生などの緊急事態でも、車両緊急情報通報装置の救急ボタンを押下することにより、無線回線を介して車両緊急情報がセンターに通報され、センターのサービス要員との会話を行なうことができる。

【0003】車両緊急情報サービスには、事故発生時の

自動通報と、緊急時の手動通報と、ロードサイドサービスの手動通報と、通常時の音声会話がある。事故発生時の自動通報は、車両の衝突や事故発生時、自動でサービスセンターへ通報し、さらに引き続いて緊急サービスセンターへ通報するものである。緊急時の手動通報は、急病人発生などの緊急時、緊急通報ボタンを押すとサービスセンターへ通報し、さらに引き続いて緊急サービスセンターへ通報するものである。ロードサイドサービスの手動通報は、パンクなどの故障で困った時、ロードサービス要求ボタンを押すとロードサービスセンターへ通報するものである。

【0004】従来の車両緊急情報通報装置は、車両の衝突事故などの緊急事態が発生した場合に、車両の位置や車両状況を無線回線を使ってセンターに通報するものである。以下、従来の車両緊急情報システムの車両制御装置の機能の概要を説明する。

(1) 通信機能(サービスセンターとの通信)：携帯電話機を用い、携帯電話の通話可能地域であれば通信可能である。9600bpsのデータ通信と音声通話が可能である。データ通信と音声通話を自動的に切り換える。自動切換機能をもつシングルダイバーシティアンテナを持つ。

(2) 位置検出機能(自車両の位置検出)：GPSにより位置検出を行なう。ジャイロを持ち、GPSの使用できないトンネルなどでも、位置を記録できる。車速センサーやリバースやブレーキの使用状態を記録する。

(3) 緊急検出機能(自車両の緊急検出)：衝突検出装置センサーと横転センサーを持ち、どのような事故が発生したかを検出する。

(4) 車両緊急情報通報機能(サービスセンターへの緊急通報)：衝突検出装置センサーと横転センサーの検知による自動通報を行なう。車両緊急情報通報ボタンの押下による手動通報もできる。

(5) ロードサイドサービス機能(サービスセンターへ支援呼び出し)：ロードサービス要求ボタンの押下による手動通報により、支援要請ができる。

(6) ハンドセット機能(ハンドセットにより音声通信が可能)とハンズフリー機能(ハンズフリーで音声通信が可能)：ハンドセットとクレドルにより通常の電話として通話できるし、マイクと専用スピーカにより、ハンズフリー通話ができる。

【0005】

【発明が解決しようとする課題】従来の車両緊急情報通報装置では、緊急事態以外には利用できず、会員の期限管理や契約変更の手続きを電話などの通信手段を利用して行なう必要があった。また、道案内などの情報をセンターから車両に伝えるためには、他の専用の情報機器を設置しなければならなかった。

【0006】本発明は、上記の従来の車両緊急情報通報装置の問題点を解決し、緊急時以外の通常時にセンター

から会員情報を送受信して、会員管理やその他の情報サービスを行なえる車両緊急情報通報装置を提供することを目的とする。

【0007】

【課題を解決するための手段】本発明は、上記の課題を解決するために、無線回線を介して会員に対して事故救助などのサービス提供を行なうセンターと車両の事故発生などの緊急事態を検出して無線回線を介して前記センターに緊急事態情報を通報する車両装置とからなる車両緊急事態情報通報システムの会員管理方法を、センターから無線回線を使用して車両装置を呼び出し、車両装置に記憶されている会員情報を読み取り、センターから会員管理のデータを車両装置に送信する構成とした。

【0008】このように構成したことにより、緊急事態以外でも会員のデータをセンターに報告したり、道案内情報をセンターから車両に送ることができる。

【0009】

【発明の実施の形態】本発明の請求項1に記載した発明は、無線回線を介して会員に対して事故救助などのサービス提供を行なうセンターと車両の事故発生などの緊急事態を検出して無線回線を介して前記センターに緊急事態情報を通報する車両装置とからなる車両緊急事態情報通報システムの会員管理方法において、前記センターから無線回線を使用して前記車両装置を呼び出し、前記車両装置に記憶されている会員情報を読み取り、前記センターから前記会員管理のデータを前記車両装置に送信することにより会員に関する情報を管理する会員管理方法であり、電話などの他の通信手段を用いることなく会員管理を可能にするという作用を有する。

【0010】本発明の請求項2に記載した発明は、車両の事故発生などの緊急事態を検出して無線回線を介して事故救助などのサービス提供を行なうセンターに緊急事態情報を通報する車両装置において、前記センターからの呼び出しに応答する手段と、記憶装置の会員管理データを読み取って前記センターに送信する手段と、前記センターからの会員管理のデータを受信して前記記憶装置に格納する手段とを具備する車両装置であり、電話などの他の通信手段を用いることなくセンターに会員情報を送ることを可能にするという作用を有する。

【0011】本発明の請求項3に記載した発明は、会員に事故救助などのサービス提供を行なうセンターと、車両の事故発生などの緊急事態を検出して無線回線を介して前記センターに緊急事態情報を通報する車両装置とからなる情報収集提供システムにおいて、前記センターに、前記車両装置を呼び出して各種データを収集する手段と、前記車両装置に各種データを送信する手段と、前記車両装置からの要求に応じて各種情報を検索して提供する手段とを設け、前記車両装置に、前記センターからの呼び出しに応答する手段と、前記車両装置の状態情報データを読み取って前記センターに送信する手段と、前

記センターからの各種情報を受信して記憶装置に格納する手段とを設けた情報収集提供システムであり、車両緊急情報通報装置を利用して会員の情報を収集したり、会員に情報を提供するという作用を有する。

【0012】以下、本発明の実施の形態について、図1を参照しながら詳細に説明する。

【0013】（第1の実施の形態）本発明の第1の実施の形態は、車両装置と無線回線を介してサービス提供を行なうシステムにおいて、無線回線を使用して会員情報を送受信する会員管理方法である。

【0014】図1は、本発明の第1の実施の形態の会員管理システムのブロック図である。図1において、車両装置搭載車両1は、事故発生などの緊急時にセンター2に事故情報などを通報して、救助を要請することができる車両である。センター2は、無線回線を介して会員に対して事故救助などのサービス提供を行なう組織である。

【0015】車両1は、常時GPSの衛星からの電波を受信していて、自己の位置を把握している。この位置情報はナビゲーションシステムに利用されるとともに、緊急時にセンター2に通報する情報として、一定時間保持される。事故発生などの緊急時には、車両1から基地局、交換局を介してセンター2に、事故情報が通報され、必要に応じて警察、消防などにもセンター2から連絡されて、緊急車両が事故現場に急行する。この点は従来の緊急通報システムと同様である。

【0016】車両緊急情報通報システムは、サービスを受ける会員が有効期限内にある場合にサービスを提供するものであるから、有効期限が切れた会員にはサービスを提供できない。緊急時以外に、センター2は、車両1を呼び出して、車両装置の期限管理を行なう。車両装置にはタイマが設けられており、期限が切れるとサービスを受けられないようになっている。

【0017】期限切れが近づくと、車両装置の方からセンターに契約更新を申し込むこともできる。期限が切れる直前にセンター2から車両装置に期限切れが近いことを知らせる。車両を何カ月も使わないことがあると、センター2から車両装置を呼び出すことができないので、猶予期間を設ける。期限切れの1カ月後に初めてセンター2と接続できたときに、契約更新ができればサービスを継続して受けられるようにする。例えば、期限切れの10カ月後にも接続できなければ、契約は更新されない。契約が有効になると、センター2から車両装置にID番号が与えられ、有効期限内では、ID番号により、センター2で認証され、サービスを受けることができる。

【0018】会員管理の通信を行なっているときに、車両1に緊急事態が発生した場合は、優先的に緊急事態情報の送信に切り替わり、会員管理処理は打ち切られる。

【0019】上記のように、本発明の第1の実施の形態では、車両装置と無線回線を介してサービス提供を行な

うシステムにおいて、無線回線を使用して会員を管理する会員管理を行なう構成としたので、電話などの他の通信手段を用いることなく会員管理ができる。

【0020】(第2の実施の形態)本発明の第2の実施の形態は、車両装置と無線回線を介してサービス提供を行なうシステムにおいて、無線回線を使用して会員を管理する手段と、無線回線を使用して会員の情報を収集する手段と、無線回線を使用して会員に情報を提供する手段とを具備する情報収集提供システムである。

【0021】本発明の第2の実施の形態の会員管理システムの構成は、第1の実施の形態と同じである。

【0022】センター2は、緊急時以外に車両1を呼び出して、車両1の各種の情報を収集する。例えば、走行距離や各種センサーのデータを収集して、車両1のメンテナンスに役立てる。

【0023】また、センター2には、情報サービスのための設備と要員を用意しておき、会員の要求に応じて、交通情報やレジャー情報を送信して、ドライブに役立てることができる。センター2と交換局との間の回線は、緊急用とは別の回線を使う。センター2から、他の情報サービス組織と回線で接続して、乗員と直接会話できるようにしてもよい。例えば、ドライブの目的地の観光案内を観光情報サービス組織に問い合わせることができるようにしてもよい。

【0024】情報収集や情報提供サービスの通信を行なっているときに、車両1に緊急事態が発生した場合は、優先的に緊急事態情報の送信に切り替わり、情報提供サ*

*サービスの処理は打ち切られる。

【0025】上記のように、本発明の第2の実施の形態では、車両装置と無線回線を介してサービス提供を行なうシステムに、無線回線を使用して会員に情報を提供する手段を設けた構成としたので、車両緊急情報通報装置を利用して、会員に各種の情報を提供することができる。

【0026】

【発明の効果】以上のように、本発明では、車両装置と無線回線を介してサービス提供を行なう車両緊急情報通報システムにおいて、無線回線を使用して会員情報を管理する構成としたので、電話などの他の通信手段を用いることなく会員管理ができるという効果が得られる。

【0027】また、車両装置と無線回線を介してサービス提供を行なう車両緊急情報通報システムに、無線回線を使用して会員を管理する手段と、無線回線を使用して会員の情報を収集する手段と、無線回線を使用して会員に情報を提供する手段とを設けたので、車両緊急情報通報装置を利用して会員の情報を収集したり、会員に情報を提供することができるという効果が得られる。

【図面の簡単な説明】

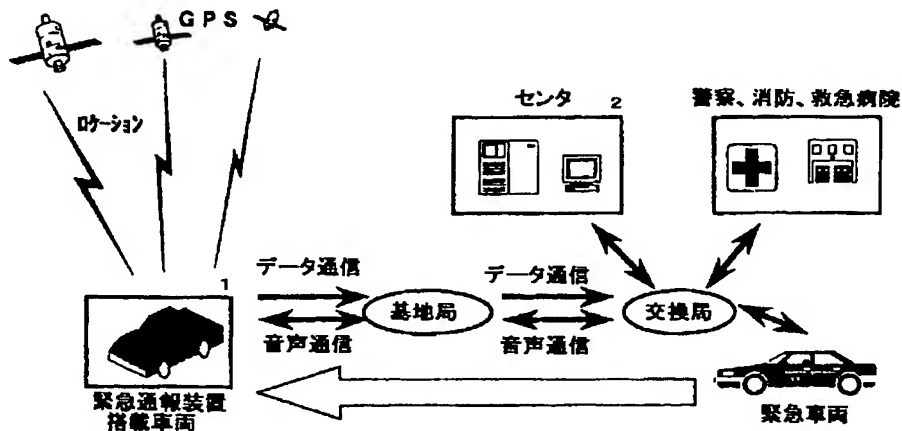

【図1】本発明の第1、2の実施の形態の会員管理システムの概略図である。

DETAILED DESCRIPTION

[Detailed Description of the Invention]

[0001]

[The technical field to which invention belongs] this invention relates to the member management method which manages a member especially using a radio circuit about the member management method of a vehicles emergency intelligence report system.

[0002]

[Description of the Prior Art] A vehicles emergency intelligence report system is a system which is automatic and notifies vehicles emergency intelligence to a service pin center,large through the vehicles emergency intelligence report equipment carried in vehicles at the time of the occurrence of accident of the collision of vehicles etc. to a radio circuit. By this system, time until urgent vehicles, such as an ambulance and a police car, arrive to a site can be shortened, and a wounded person can be rescued and relieved more quickly. Moreover, by carrying out the depression of the emergency button of vehicles emergency intelligence report equipment, through a radio circuit, vehicles emergency intelligence is notified to a pin center,large, and emergencies, such as emergency case generating, can also hold conversation with the service staff of a pin center,large.

[0003] There is usually voice conversation at the time in vehicles emergency intelligence service with the automatic report at the time of the occurrence of accident, the manual report in emergency, and the manual report of load side service. At the time of a collision and the occurrence of accident of vehicles, the automatic report at the time of the occurrence of accident is automatic, is notified to a service pin center,large, and is notified to an urgent service pin center,large further succeedingly. If emergency, such as emergency case generating, and an emergency call button are pushed, the manual report in emergency will be notified to a service pin center,large, and will be notified to an urgent service pin center,large further succeedingly. When troubled by failure of a blowout etc., the manual report of load side service will be notified to a load service pin center,large, if a load service request button is pushed.

[0004] Conventional vehicles emergency intelligence report equipment notifies the position and vehicles situation of vehicles to a pin center,large using a radio circuit, when emergencies, such as a collision of vehicles, occur. Hereafter, the

outline of the function of the vehicles control unit of the conventional vehicles emergency intelligence system is explained.

(1) Communication facility (communication with a service pin center,large) : using a portable telephone, if it is the area of a cellular phone which can be talked over the telephone, it can communicate. 9600bps data communication and a voice telephone call are possible. Data communication and a voice telephone call are switched automatically. It has a single diversity antenna with an automatic change function.

(2) Position detection function (position detection of self-vehicles) : GPS performs position detection. It has a gyroscope and a position can be recorded also in the tunnel which cannot use GPS. The busy condition of a vehicle speed sensor, reverse, or a brake is recorded.

(3) Urgent detection function (urgent detection of self-vehicles) : it has a collision-detection equipment sensor and a sideslip sensor, and detect what accident occurred.

(4) Vehicles emergency intelligence report function (emergency call in the service pin center,large) : perform the automatic report by detection of a collision-detection equipment sensor and a sideslip sensor. The manual report by the depression of a vehicles emergency intelligence report button can also be performed.

(5) Load side service function (it is a support call to a service pin center,large) : a support request is made by the manual report by the depression of a load service request button.

(6) A hand-set function (speech communication is possible by the hand set), and a handsfree function (speech communication is possible at handsfree) : it can talk over the telephone as a usual telephone with a hand set and a cradle, and a handsfree telephone call can be performed by the microphone and the exclusive loudspeaker.

[0005]

[Problem(s) to be Solved by the Invention] With conventional vehicles emergency intelligence report equipment, it could not use in addition to emergency, but procedure of term management of a member or contract change needed to be performed using means of communications, such as a telephone. Moreover, in order to tell information, such as guidance, to vehicles from a pin center,large, the information machines and equipment of other exclusive use had to be installed.

[0006] this invention solves the trouble of above conventional vehicles emergency intelligence report equipment, and aims at offering vehicles emergency intelligence report equipments other than emergency which sometimes usually transmit from a pin center,large and receive member information, and can perform member management and other information services.

[0007]

[Means for Solving the Problem] In order that this invention may solve the above-mentioned technical problem the vehicles emergency which consists of vehicles equipment which detects emergencies which perform service provisions, such as accident rescue, to a member through a radio circuit, such as the occurrence of a pin center,large and vehicles of accident, and notifies emergency information to

the aforementioned pin center,large through a radio circuit -- a well-informed person -- the member management method of a news system Vehicles equipment was called from the pin center,large using the radio circuit, the member information memorized by vehicles equipment was read, and the data of member management were considered as the composition transmitted to vehicles equipment from the pin center,large.

[0008] Thus, by having constituted, a member's data can be reported to a pin center,large also except emergency, or guidance information can be sent to vehicles from a pin center,large.

[0009]

[Embodiments of the Invention] Invention indicated to the claim 1 of this invention In the member management method of a news system the vehicles emergency which consists of vehicles equipment which detects emergencies which perform service provisions, such as accident rescue, to a member through a radio circuit, such as the occurrence of a pin center,large and vehicles of accident, and notifies emergency information to the aforementioned pin center,large through a radio circuit -- a well-informed person -- Call the aforementioned vehicles equipment from the aforementioned pin center,large using a radio circuit, and the member information memorized by the aforementioned vehicles equipment is read. It is the member management method which manages the information about a member by transmitting the data of the aforementioned member management to the aforementioned vehicles equipment from the aforementioned pin center,large, and it has operation of enabling member management, without using other means of communications, such as a telephone.

[0010] In the vehicles equipment which notifies emergency information to the pin center,large which invention indicated to the claim 2 of this invention detects emergencies, such as the occurrence of vehicles of accident, and performs service provisions, such as accident rescue, through a radio circuit A means to answer a call from the aforementioned pin center,large, and a means to read the member management data of storage and to transmit to the aforementioned pin center,large, It is vehicles equipment possessing a means to receive the data of the member management from the aforementioned pin center,large, and to store in the aforementioned storage, and it has operation of making it possible to send member information to a pin center,large, without using other means of communications, such as a telephone.

[0011] The pin center,large where invention indicated to the claim 3 of this invention performs service provisions, such as accident rescue, to a member, In the information gathering offer system which consists of vehicles equipment which detects emergencies, such as the occurrence of vehicles of accident, and notifies emergency information to the aforementioned pin center,large through a radio circuit A means to call the aforementioned vehicles equipment to the aforementioned pin center,large, and to collect various data, A means to establish a means to transmit various data to the aforementioned vehicles equipment, and a means to search and offer various information according to the demand from the aforementioned vehicles equipment, and to answer the aforementioned vehicles equipment from the aforementioned pin center,large at a call, A means to read the

status information data of the aforementioned vehicles equipment, and to transmit to the aforementioned pin center, large, It is the information gathering offer system which established a means to have received the various information from the aforementioned pin center, large, and to store in storage, and has operation of collecting a member's information or providing a member with information using vehicles emergency intelligence report equipment.

[0012] Hereafter, the form of operation of this invention is explained in detail, referring to drawing 1 .

[0013] (Gestalt of the 1st operation) The gestalt of operation of the 1st of this invention is a member management method which transmits and receives member information using a radio circuit in vehicles equipment and the system which performs service provision through a radio circuit.

[0014] Drawing 1 is the block diagram of the member managerial system of the gestalt of operation of the 1st of this invention. In drawing 1 , the vehicles equipment loading vehicles 1 are vehicles which can notify accident information etc. to a pin center, large 2 in emergency, such as the occurrence of accident, and can demand rescue. A pin center, large 2 is an organization which performs service provisions, such as accident rescue, to a member through a radio circuit.

[0015] Vehicles 1 have always received the electric wave from the satellite of GPS, and grasp the self position. While being used for a navigation system, fixed time maintenance of this positional information is carried out as information notified to a pin center, large 2 in emergency. Accident information is notified to a pin center, large 2 through a base station and the exchange in emergency, such as the occurrence of accident, from vehicles 1, the police, fire fighting, etc. are connected with from a pin center, large 2 if needed, and urgent vehicles hasten to an accident site.

PRIOR ART

[Description of the Prior Art] A vehicles emergency intelligence report system is a system which is automatic and notifies vehicles emergency intelligence to a service pin center, large through the vehicles emergency intelligence report equipment carried in vehicles at the time of the occurrence of accident of the collision of vehicles etc. to a radio circuit. By this system, time until urgent vehicles, such as an ambulance and a police car, arrive to a site can be shortened, and a wounded person can be rescued and relieved more quickly. Moreover, by carrying out the depression of the emergency button of vehicles emergency intelligence report equipment, through a radio circuit, vehicles emergency intelligence is notified to a pin center, large, and emergencies, such as emergency case generating, can also hold conversation with the service staff of a pin center, large.

[0003] There is usually voice conversation at the time in vehicles emergency intelligence service with the automatic report at the time of the occurrence of accident, the manual report in emergency, and the manual report of load side service. At the time of a collision and the occurrence of accident of vehicles, the automatic report at the time of the occurrence of accident is automatic, is notified to a service pin center, large, and is notified to an urgent service pin center, large further succeedingly. If emergency, such as emergency case generating, and an emergency call button are pushed, the manual report in emergency will be notified to a service pin center, large, and will be notified to an urgent service pin center, large further succeedingly. When troubled by failure of a blowout etc., the manual report of load side service will be notified to a load service pin center, large, if a load service request button is pushed.

[0004] Conventional vehicles emergency intelligence report equipment notifies the position and vehicles situation of vehicles to a pin center, large using a radio circuit, when emergencies, such as a collision of vehicles, occur. Hereafter, the outline of the function of the vehicles control unit of the conventional vehicles emergency intelligence system is explained.

(1) Communication facility (communication with a service pin center, large) : using a portable telephone, if it is the area of a cellular phone which can be talked over the telephone, it can communicate. 9600bps data communication and a voice telephone call are possible. Data communication and a voice telephone call are switched automatically. It has a single diversity antenna with an automatic change

function.

(2) Position detection function (position detection of self-vehicles) : GPS performs position detection. It has a gyroscope and a position can be recorded also in the tunnel which cannot use GPS. The busy condition of a vehicle speed sensor, reverse, or a brake is recorded.

(3) Urgent detection function (urgent detection of self-vehicles) : it has a collision-detection equipment sensor and a sideslip sensor, and detect what accident occurred.

(4) Vehicles emergency intelligence report function (emergency call in the service pin center,large) : perform the automatic report by detection of a collision-detection equipment sensor and a sideslip sensor. The manual report by the depression of a vehicles emergency intelligence report button can also be performed.

(5) Load side service function (it is a support call to a service pin center,large) : a support request is made by the manual report by the depression of a load service request button.

(6) A hand-set function (speech communication is possible by the hand set), and a handsfree function (speech communication is possible at handsfree) : it can talk over the telephone as a usual telephone with a hand set and a cradle, and a handsfree telephone call can be performed by the microphone and the exclusive loudspeaker.

1. This document has been translated by computer. So the translation may not reflect the original precisely.
2. **** shows the word which can not be translated.
3. In the drawings, any words are not translated.

EFFECT OF THE INVENTION

[Effect of the Invention] As mentioned above, in this invention, in vehicles equipment and the vehicles emergency intelligence report system which performs service provision through a radio circuit, since it is considered as the composition which manages member information using a radio circuit, the effect that member management can be performed is acquired, without using other means of communications, such as a telephone.

[0027] Moreover, vehicles equipment and a means to manage a member using a radio circuit to the vehicles emergency intelligence report system which performs service provision through a radio circuit, Since a means to collect a member's information using a radio circuit, and a means to provide a member with information using a radio circuit were established, the effect that a member's information can be collected or a member can be provided with information using vehicles emergency intelligence report equipment is acquired.

TECHNICAL PROBLEM

[Problem(s) to be Solved by the Invention] With conventional vehicles emergency intelligence report equipment, it could not use in addition to emergency, but procedure of term management of a member or contract change needed to be performed using means of communications, such as a telephone. Moreover, in order to tell information, such as guidance, to vehicles from a pin center, large, the information machines and equipment of other exclusive use had to be installed. [0006] this invention solves the trouble of above conventional vehicles emergency intelligence report equipment, and aims at offering vehicles emergency intelligence report equipments other than emergency which sometimes usually transmit from a pin center, large and receive member information, and can perform member management and other information services.

MEANS

[Means for Solving the Problem] In order that this invention may solve the above-mentioned technical problem the vehicles emergency which consists of vehicles equipment which detects emergencies which perform service provisions, such as accident rescue, to a member through a radio circuit, such as the occurrence of a pin center, large and vehicles of accident, and notifies emergency information to the aforementioned pin center, large through a radio circuit -- a well-informed person -- the member management method of a news system Vehicles equipment was called from the pin center, large using the radio circuit, the member information memorized by vehicles equipment was read, and the data of member management were considered as the composition transmitted to vehicles equipment from the pin center, large.

[0008] Thus, by having constituted, a member's data can be reported to a pin center, large also except emergency, or guidance information can be sent to vehicles from a pin center, large.

[0009]

[Embodiments of the Invention] Invention indicated to the claim 1 of this invention In the member management method of a news system the vehicles emergency which consists of vehicles equipment which detects emergencies which perform service provisions, such as accident rescue, to a member through a radio circuit, such as the occurrence of a pin center, large and vehicles of accident, and notifies emergency information to the aforementioned pin center, large through a radio circuit -- a well-informed person -- Call the aforementioned vehicles equipment from the aforementioned pin center, large using a radio circuit, and the member information memorized by the aforementioned vehicles equipment is read. It is the member management method which manages the information about a member by transmitting the data of the aforementioned member management to the aforementioned vehicles equipment from the aforementioned pin center, large, and it has operation of enabling member management, without using other means of communications, such as a telephone.

[0010] In the vehicles equipment which notifies emergency information to the pin center, large which invention indicated to the claim 2 of this invention detects emergencies, such as the occurrence of vehicles of accident, and performs service provisions, such as accident rescue, through a radio circuit A means to answer a call from the aforementioned pin center, large, and a means to read the member

management data of storage and to transmit to the aforementioned pin center,large, It is vehicles equipment possessing a means to receive the data of the member management from the aforementioned pin center,large, and to store in the aforementioned storage, and it has operation of making it possible to send member information to a pin center,large, without using other means of communications, such as a telephone.

[0011] The pin center,large where invention indicated to the claim 3 of this invention performs service provisions, such as accident rescue, to a member, In the information gathering offer system which consists of vehicles equipment which detects emergencies, such as the occurrence of vehicles of accident, and notifies emergency information to the aforementioned pin center,large through a radio circuit A means to call the aforementioned vehicles equipment to the aforementioned pin center,large, and to collect various data, A means to establish a means to transmit various data to the aforementioned vehicles equipment, and a means to search and offer various information according to the demand from the aforementioned vehicles equipment, and to answer the aforementioned vehicles equipment from the aforementioned pin center,large at a call, A means to read the status information data of the aforementioned vehicles equipment, and to transmit to the aforementioned pin center,large, It is the information gathering offer system which established a means to have received the various information from the aforementioned pin center,large, and to store in storage, and has operation of collecting a member's information or providing a member with information using vehicles emergency intelligence report equipment.

[0012] Hereafter, the gestalt of operation of this invention is explained in detail, referring to drawing 1 .

[0013] (Gestalt of the 1st operation) The gestalt of operation of the 1st of this invention is a member management method which transmits and receives member information using a radio circuit in vehicles equipment and the system which performs service provision through a radio circuit.

[0014] Drawing 1 is the block diagram of the member managerial system of the gestalt of operation of the 1st of this invention. In drawing 1 , the vehicles equipment loading vehicles 1 are vehicles which can notify accident information etc. to a pin center,large 2 in emergency, such as the occurrence of accident, and can demand rescue. A pin center,large 2 is an organization which performs service provisions, such as accident rescue, to a member through a radio circuit.

[0015] Vehicles 1 have always received the electric wave from the satellite of GPS, and grasp the self position. While being used for a navigation system, fixed time maintenance of this positional information is carried out as information notified to a pin center,large 2 in emergency. Accident information is notified to a pin center,large 2 through a base station and the exchange in emergency, such as the occurrence of accident, from vehicles 1, the police, fire fighting, etc. are connected with from a pin center,large 2 if needed, and urgent vehicles hasten to an accident site. This point is the same as that of the conventional emergency reporting system.

[0016] Since a vehicles emergency intelligence report system offers service when the member who receives service is in the term of validity, it cannot provide with

service the member by whom the term of validity went out. In addition to emergency, a pin center,large 2 calls vehicles 1 and performs term management of vehicles equipment. The timer is formed in vehicles equipment, and service cannot be received no longer if a term expires.

[0017] If expiration approaches, it can also apply for renewal of a contract to a pin center,large from the direction of vehicles equipment. It tells that expiration is close to pin center,large 2 empty-vehicle both equipments just before a term expires. Since pin center,large 2 empty-vehicle both equipments cannot be called unless it may use vehicles for how many months, a grace period is prepared. If renewal of a contract can be performed, service will be continued and it will enable it to receive, when connectable [for the first time] with a pin center,large 2 one month after expiration. For example, a contract is not updated if not connectable ten months after expiration. If a contract becomes effective, an identification number is given to pin center,large 2 empty-vehicle both equipments, within the term of validity, it is attested by the identification number in the pin center,large 2, and service can be received.

[0018] While communicating member management, when emergency occurs on vehicles 1, it changes to transmission of emergency information preferentially, and member management processing is closed.

[0019] As mentioned above, with the form of operation of the 1st of this invention, in vehicles equipment and the system which performs service provision through a radio circuit, since it considered as the composition which performs member management which manages a member using a radio circuit, member management can be performed, without using other means of communications, such as a telephone.

[0020] (Form of the 2nd operation) The form of operation of the 2nd of this invention is an information gathering offer system possessing a means to manage a member using a radio circuit, a means to collect a member's information using a radio circuit, and a means to provide a member with information using a radio circuit, in vehicles equipment and the system which performs service provision through a radio circuit.

[0021] The composition of the 2nd of the member managerial system of the form of operation of this invention is the same as the form of the 1st operation.

[0022] A pin center,large 2 calls vehicles 1 in addition to emergency, and collects various kinds of information on vehicles 1. For example, the data of mileage or various sensors are collected and it uses for the maintenance of vehicles 1.

[0023] Moreover, the facility for information service and the necessary personnel are prepared for the pin center,large 2, and according to a demand of a member, traffic information and leisure information can be transmitted and it can use for a drive. Circuit with the another object for urgent is used for the circuit between a pin center,large 2 and the exchange. From a pin center,large 2, it connects by other information service organizations and circuits, and is made to carry out with crew direct conversation. For example, you may enable it to ask a sightseeing information service organization sightseeing guidance to the destination of a drive.

[0024] While performing communication of information gathering or information

offer service, when emergency occurs on vehicles 1, it changes to transmission of emergency information preferentially, and processing of information offer service is closed.

[0025] As mentioned above, with the form of operation of the 2nd of this invention, since it considered as the composition which established a means to provide a member with information at vehicles equipment and the system which performs service provision through a radio circuit using a radio circuit, a member can be provided with various kinds of information using vehicles emergency intelligence report equipment.
